FlyTambora.com

TAMBORA

Too busy building to make a website.

FlyTambora.com launches end of 2026

AUTONOMOUS DRONE INFRASTRUCTURE, STARTING WITH SECURITY.

Tambora builds autonomous drones, their docks and the AI that flies them, starting with security in South Africa through SafeGuard. We begin with one simple aircraft and get the AI and the data right. Then, one small design step at a time, we move towards medical and heavy-load aviation, and one day, vehicles that fly.

Until then, follow our first drone mission, SafeGuard, at safeguardtechno.com

One company, one mission.
Built in increments.

PARENT

TAMBORA

Owns the technology, the AI and the team

NOW · SECURITY

SafeGuard

SafeGuard Technologies (Pty) Ltd

Autonomous security drones that launch from docks on site, patrol day and night, and alert response teams in seconds. Where our mission starts.

STATUS

● In action · deploying

NOW · RESEARCH & AI

Sagwic

Tambora's research division

The research and software layer behind all of our AI. Sagwic designs and builds the docks, and is testing our own in-house AI layer.

STATUS

● Active · testing our AI

FORESEEABLE FUTURE

Tambora Medical

Future mission

Heavy-load medical delivery. Master that, and most of the breakthroughs that follow are within reach. The roadmap ahead is exciting.

STATUS

○ Not yet active

From simple to complex. The idea is to build from the simplest airframe to the most complex, through incremental, flight-validated iterations that scale payload and autonomy.

2026

Build our first MVPs

All cash invested into our first autonomous MVPs
